

# Typical DeltaWave Installation

The probe assembly mounts under the material bin gate at an angle. Material flows over the probe as it goes into the batcher.

When the need for moisture control arises, look to the ACECO DeltaWave Moisture Recorder. The DeltaWave System has a proven track record of accurately measuring the moisture present in both sand and other aggregates. Thoroughly tested, more than 1000 probes have been installed.

The DeltaWave system is easily operated and calibrated. The operator chooses the desired function from a menu and answer a few simple questions.

**ACECO continues to offer 24 hour, 365 day a year telephone support**
